Alan C. Lockett

- Visionary, Outstanding work ethic, Strong values

C&C OIL COMPANY

- Lockett is founder, President and CEO.
- Company established in 1988
- Produces alternative line of lubricants for optimum performance and longevity
- Lockett is licensed Certified Lubrication Specialist
- Member of Institute of Electrical and Electronics Engineers
- Member Society of Tribologists and Lubrication Engineers
- Lockett has two U.S. and International lubricant patents
- Developed a lubricant for industrial turbines used in power generation industries including nuclear, gas, steam and hydro-electric plants—now specified for Siemens, General Electric, Mitsubishi field service
- Contracted as Lubrication Consultant for all Power Generation Facilities of the Southern Company
- Author of “Keep the Kiln Running!” article in WORLD CEMENT magazine (1/08)

Technical Service

- 28 years of field experience
- Provides and performs lubricant recommendations, consolidations, cross-referencing and trouble shooting.
- Expert in steam, hydro, nuclear and natural gas fired plants
- Expert in cement, lime, minerals and chemicals
- Expert in wire drawing, box board, pulp and paper mills
- Expert in evaluating, testing and maintaining critical performance characteristics
- Expert in ASTM testing methods

- Never quit attitude, Committed to peak performance, Committed to others

History of Successful Assessment

- C&C removes excessive volumes of water from turbine oil reserve after days of filtration by plant employees proves unsuccessful. C&C called to help and within hours provides immediate results. Turbine is now able to be shut down with no damage, saving thousands of dollars. Moreover, the unit generates revenues of \$500,000 per day and little if any was lost thanks to C&C
- Rusting Pulverizer reduction gear needed for service saved by C&C. C&C incorporates a change to additive chemistry, resulting in a new lubricant formulation for cost of less than \$2. The results eliminated rusting to components while in storage and did not require additional products or labor performed prior to installation. C&C saved company the cost of rebuilding the gear--\$300,000.
- C&C introduces new product needed during annual maintenance to prevent cross contaminating oil reservoir in Steam and Gas Turbines. This product is now utilized during annual maintenance by General Electric, Siemens-Westinghouse and Mitsubishi among others.

Caring about Clients

- Expert in lubricant additive enhancement to meet and maintain optimum performance levels to maximize your assets.
- Expert in determining the cause of lubricant issues and implementing a corrective action solution.
- Expert in establishing lubricant performance base lines for new lubricants and in-service fluids to assure the equipment is being properly protected and suppliers are delivering a quality product.
- Expert in lubrication consolidation that minimizes the different types and number of products for equipment use and number of products in inventory.
- Expert in translation of the type and performance levels for a lubricant as references by equipment manufacturers.
- Expert in environmental issues and impacts of lubricants and additives.
- Expert in analyzing and understanding solutions to problems which arise from everyday use in the industrial plant environment.
